Online Shopping Habits: A Look into Impulse Buying vs Planned Buying Among Different Types of People.

1 INTRODUCTION

- Online shopping is growing rapidly.
- Impulse buying is often triggered by ads, discounts, and emotions.
- Planned buying is more budget-conscious and linked with income level.
- Research Goal: To analyze whether demographics, income, and marketing triggers affect buying type.

2 METHODOLOGY

- Data: 128 responses (Google Form survey).
- Variables: Gender, income, buyer type, triggers, monthly spending.
- Software: SPSS for descriptive & inferential analysis.
- Tests Applied: Chi-square, Bar Chart, Pie Chart, Hypothesis Test

3 OBJECTIVES

- To analyze online shopping behavior, focusing on the difference between impulse buying and planned buying.
- To identify demographic influences (age, gender, occupation, income) on shopping habits.
- To measure frequency and spending patterns of online shoppers.

4 KEY FINDINGS

BUYING BEHAVIOR TYPES

- Online shoppers are divided into impulsive buyers and planned buyers.
- Impulse buying was more common, triggered by ads, discounts, and emotions.
- Planned buying was seen more among higher income and older respondents.

SPENDING & FREQUENCY

- Average monthly spending varied widely across respondents.
- Some spend very little, while others spend much more → high variability (large standard deviation).
- Shopping frequency also differed across demographic groups.

DEMOGRAPHIC & MARKETING INFLUENCE

- Income and age influence buying type (planned vs impulsive).
- Gender differences were present visually but not statistically strong.
- Discounts, ads, and peer influence were the strongest triggers for impulse buying.

OVERALL TREND

- Impulse buying dominates online shopping.
- Consumer decisions are often situational and driven by external stimuli rather than necessity.
- Marketing strategies that use discounts and emotional triggers have a strong impact.

5 VISUAL REPRESENTATION

TEST OF HYPOTHESIS

Gender	Impulsive	Planned	Total
Male	35	20	55
Female	40	33	73
Total	75	53	128

Chi-Square Result:
 $\chi^2 = 3.27$, $df = 1$,
 $p = 0.071$.
Since, $p > 0.05$;
Gender does not significantly affect whether buyers are impulsive or planned.

6 CONCLUSION

Impulse buying is a dominant factor in online shopping, strongly influenced by discounts and marketing triggers. Planned buying is more common among higher-income and older groups, while gender differences were not significant. Overall, consumer choices are situational and stimulus-driven
